Luxembourg in numbers · 2025

Who makes up Luxembourg in 2025?

Luxembourg split by nationals, residents, workers and voters

691,000 people live in Luxembourg, 535,000 work there and 284,000 are registered to vote in national elections. Every block below is drawn to scale: its area is proportional to the number of people it represents.

Data: population on 1 January 2025 · jobs in 2025 · registered voters at the 2023 legislative election · job profile of the electorate from the 2013 census, the latest published

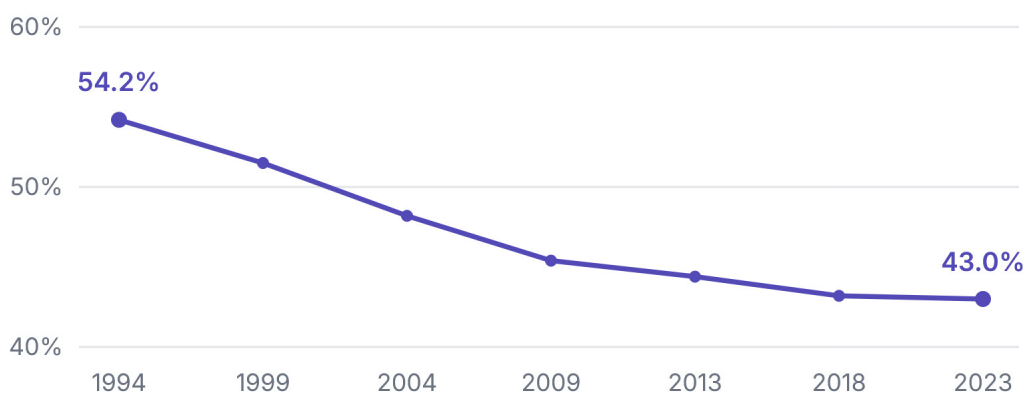

How to read it

- Green is residents not in paid work in Luxembourg, darker with age. Blue is jobs located in Luxembourg: private, public and conventionné, and international organisations.
- The jobs band has the same height for every group, so the depth of the dark-blue layer shows each group's public-sector share.
- Above the band are residents not working here: children, retirees, jobseekers and others. Cross-border workers' households live abroad and are not shown; many will draw Luxembourg pensions later. In 2025, 125,687 of the general scheme's pensions (53%) were paid abroad.
- Blocks marked * are estimated splits of official totals, shown as ranges where the uncertainty is large. The cross-border public strip is spread evenly across countries.

Registered voters as a share of residents

Legislative elections, 1994–2023

47%

of residents are foreign nationals, up from 26% in 1981

45%

of jobs in the national economy are held by cross-border workers

43%

of residents were registered to vote in 2023, down from 54% in 1994

37–47%

of Luxembourgers in work have public or conventionné jobs*, against 17–27% of foreign residents and 6–13% of cross-border workers

The data behind each block

Block	People	Basis
Luxembourg nationals · 368,900		
Minors and non-voters	91k	Nationals minus resident voters
Voters 65+	~71k	All 65+ minus the 31.4% foreign
Voters not working *	~61k	Residual
Jobseekers *	~7k	ADEM nationality share × 21,090
Private jobs	78k	Resident workers by nationality minus public
State agents	~31k	37,359 agents, 91% nationals, minus ~2,600 living abroad
Other public and conventionné *	20–35k	2013 census share of voters in public jobs, applied to 2025
Foreign residents · 322,100		
Aged 0–19	~58k	STATEC age table, foreign share by age band
Aged 65+	~33k	31.4% of 103,889 residents 65+
Not working, 20–64 *	~58k	Residual
Jobseekers *	~14k	About two-thirds of 21,090
International organisations	12.7k	STATEC, residents only (2023)
Private jobs *	105–120k	Resident workers by nationality minus public
Public and conventionné *	25–40k	Remainder of 120,264 public jobs
Cross-border workers · 237,200		
France · Germany · Belgium	129 · 55 · 54k	2025 salaried counts, scaled to 237,200
Public and conventionné *	15–30k	Remainder of 120,264, spread evenly by country
Totals		
All jobs	535k	522,200 national economy + 12,700 international organisations
Registered voters	283,879	2023 election, incl. ~6,400 living abroad

* Estimated. Population for 2009 and 2018 in the trend chart is STATEC's 1 January count as recalled, not from the linked sources; the trend does not depend on it.

How the chart is built

The mosaic is hand-written SVG. Every block has the same area per person. The jobs band has one fixed height, so each group's band width is proportional to its jobs; the blocks above are stacked on that width, so their heights follow from their counts. This script reproduces the layout:

```
A = 133.9   # area per 1,000 people (SVG units²)
H = 124.3   # fixed height of the jobs band
groups = {  # jobs (k), blocks above the band (k), bottom→top
    "Lux nationals":     (139, [7, 61, 71, 91]),
    "Foreign residents": (159, [14, 58, 33, 58]),
    "Cross-border":      (237, []),
}
x, band_top = 20, 275.7
for name, (jobs, above) in groups.items():
    w = jobs * A / H          # band width ∝ jobs
    y = band_top
    for k in above:           # stack upwards
        h = k * A / w         # same area per person
        y -= h
        print(f"{name}: {k}k  y={y:.1f}  h={h:.1f}")
    print(f"{name}: band x={x:.1f}  w={w:.1f}")
    x += w
```
